

Plants proven safe for Bearded Dragons:

The following is a list of plants that are known to be safe for Bearded Dragons. This information was found at Melissa Kaplan's website (www.anapsid.org) as well as [Melissa Kaplan's Herp and Green Iguana Information Collection](#). Remember, when buying plants from a store, you have to replant them and wait 6 to 12 weeks for the pesticides to "grow out" before feeding.

Alfalfa	Astilbe	Baby's Tears	Basil (leaves and flowers)
			
Carnations (petals)	Chamomile, English	Chinese Lantern (flowers)	Clover
